Designation	CEO

Contents

- 1. Introduction
- 2. Energy Conservation and Efficiency
- 3. Water Management
 - a. Clean Water Conservation
 - b. Wastewater Treatment
- 4. Waste Management
 - a. Non-Hazardous Waste Management
 - b. Hazardous Waste Management
- 5. Greenhouse Gas Emissions
 - a. Monitoring and Tracking
 - b. Reporting Standards
- 6. Supplier and Community Engagement
 - a. Supplier Influence
 - b. Community Outreach
- 7. Green Procurement
 - a. Environmental Criteria
 - b. Life Cycle Assessment
 - c. Compliance with Standards
 - d. Collaboration and Innovation

Viyash is dedicated to conducting business with a strong commitment to environmental sustainability and the preservation of natural resources. We recognize the significant role of human activities in climate change and actively promote an organizational culture of environmental responsibility. Our primary objective is to protect the environment, and we actively encourage all our workforce to actively participate in these endeavours.

To uphold our commitment to environmental protection, we have implemented the following practices:

- Energy Conservation and Efficiency: We uphold responsible energy usage by integrating energy-saving techniques and equipment into our daily operations. We will enhance our energy efficiency by reducing consumption.
- Water Management: Clean water is an invaluable resource, and we prioritize its conservation. We strive to reduce our water consumption and continually assess our operations to identify any areas where water usage can be minimized. Furthermore, we ensure that all wastewater generated during our processes is treated in our inhouse treatment facilities or external treatment facilities in compliance to Pollution Control Norms. We are committed to overseeing our operations with utmost care, both internally and externally, by implementing measures to proactively mitigate any potential pollution.

Waste Management:

- Non-Hazardous Waste Management
 - We continually streamline our procedures and processes to enhance efficiency and minimize the consumption of day-to-day operational resources, such as paper and electronic equipment, among others.
 - Our commitment to reducing the Group's waste footprint involves a strong focus on recycling, reducing and reusing materials whenever possible. We set waste reduction and recycling targets wherever feasible to ensure tangible progress.
 - To promote sustainability, we actively work towards decreasing our reliance on existing products in our operations, while simultaneously sourcing from recycled or sustainable forest sources.
- Hazardous Waste Management:
 We prioritize the safety of our operations by taking necessary precautions and adhering to all relevant legislation governing the

handling and disposal of hazardous materials. Our commitment to compliance ensures that we meet the highest standards of safety and environmental protection. By implementing robust protocols and guidelines, we mitigate risks associated with hazardous materials and safeguard the well-being of our employees, the community, and the environment.

- Greenhouse Gas: We are dedicated to conducting our operations in a sustainable manner, actively seeking ways to minimize our environmental footprint. As part of this commitment, we have implemented a robust monitoring system to track greenhouse gas (GHG) emissions. This data serves as a foundation for setting goals and reporting our progress transparently. We voluntarily report our GHG emissions in accordance with recognized reporting standards, providing comprehensive information on both Scope 1 emissions and Scope 2 emissions and Scope 3.
- Supplier and Community Engagement: We recognize the significant indirect impact we can have on environmental performance throughout our value chain and investments. To ensure sustainability remains a core aspect of our business activities, we undertake the following initiatives:
 - Supplier Influence: We actively engage with our suppliers to raise awareness of environmental issues and promote eco-friendly practices. Our efforts align with the Viyash's Supplier Code of Conduct, which outlines professional environmental considerations. By working closely with our suppliers, we strive to drive positive change and encourage environmentally responsible practices across our value chain.
 - Community Outreach: We are committed to raising awareness of environmental issues and fostering eco-friendly practices within the communities in which we operate. Through strategic partnerships with industry groups and environmental organizations, we strive to educate and engage local communities. These efforts contribute to building a more sustainable future and promoting environmental stewardship at a grassroots level.
- Green Procurement: Viyash's commitment to green procurement is unwavering. We actively support and promote environmental practices

throughout our supply chain by adhering to the following guidelines during the procurement process:

- Environmental Criteria: We prioritize suppliers who demonstrate strong environmental performance and offer products or services that align with our sustainability goals. Environmental criteria are integrated into our procurement evaluations, ensuring that sustainability considerations play a crucial role in supplier selection.
- ➤ Life Cycle Assessment: We plan to conduct life cycle assessments to evaluate the environmental impact of products. This assessment takes into account factors such as resource consumption, energy efficiency, and waste generation, allowing us to make informed choices that minimize environmental impact.
- Compliance with Standards: We require our suppliers to comply with relevant environmental regulations and standards. This includes adherence to responsible sourcing practices, waste management protocols, and environmentally friendly manufacturing processes.
- Collaboration and Innovation: We actively engage with our suppliers to foster collaboration and innovation in green procurement. By sharing knowledge and providing training, when necessary, we strive to drive continuous improvement in sustainability throughout the supply chain.
